

Horizon Health Network's Primary Health Care Access Coordinators (PHCACs) are located in Fredericton, Miramichi, Moncton, and Saint John and are based in Community.

PHCACs work to develop partnerships with the Primary Health Care community and leadership within the RHA service areas and other community-based public and private stakeholders to identify resources and services that could benefit primary care providers. We then connect these resources to both physicians and nurse practitioners to enhance their practice, such as diabetes outreach.

The PHCACs work closely with Patient Connect NB (811) and community based primary health care providers to link residents to a primary health care provider in their community.
